Memorandum

November 8, 1977

TO: Ronald Lauer, M.D.
Robert Shank, M.D.
Charles Glueck, M.D.

FROM: Mary Winston, Ed.D. Mary W.N.

The attached is another revision of the proposed statement prepared for the Committee by Henry McGill. He did this in an effort to bring us one step closer to a completed statement or at least an agreement on a statement at the conclusion of our November 18th conference call. We will discuss this in conjunction with the first one prepared by Charlie. Between the two, hopefully, we will be able to complete our assignment in time for Charlie to report to the Council Affairs meeting in November.

Summary

The Shell Coal Gasification Process (SCGP) is a clean and efficient process for converting coal into synthesis gas. Synthesis gas is a versatile mixture of carbon monoxide and hydrogen that can be converted into many valuable products: electricity, synthetic natural gas, chemicals and liquid transportation fuels among them. SCGP is competitive for all applications because of its simple operation, its dry feed system and its generation of superheated steam in the syngas cooler which give excellent thermal efficiency.

NOVEMBER 1986

Fourth Advanced Coal Gasification Symposium, Su Zhou, China

THE SHELL COAL GASIFICATION PROCESS

Maarten van der Burgt and Jaap van Klinken

Maarten van der Burgt and Jaap van Klinken work in the Synfuels Development and Commercialisation Department of Shell Internationale Petroleum Maatschappij, The Hague, the Netherlands. Van Klinken is the head of the Department while van der Burgt is the group leader responsible for distillate synthesis and biomass upgrading. Both were previously at the Shell Amsterdam laboratory.

ISSUE ANALYSIS - ACID RAIN

SITUATION ANALYSIS

- Sulphur and nitrogen are essential to life; however, the long range transport and deposition of air pollutants such as the oxides of sulphur and nitrogen can cause a number of problems, such as the following:

  - acidification of lakes and rivers to make them inhospitable to fish and other aquatic life,
  - corrosion of buildings and equipment,
  - reduction of the productivity of soil due to acidification,
  - vegetation damage,
  - leaching of heavy metals from the soil by acidic waters into drinking water supplies,
  - reduced visibility.

  These effects are usually referred to as "The Acid Rain Problem." There is considerable argument as to the chemistry of acid precipitation, its formation, transport mechanisms, and sources. However, they are a subject of public and government concern.

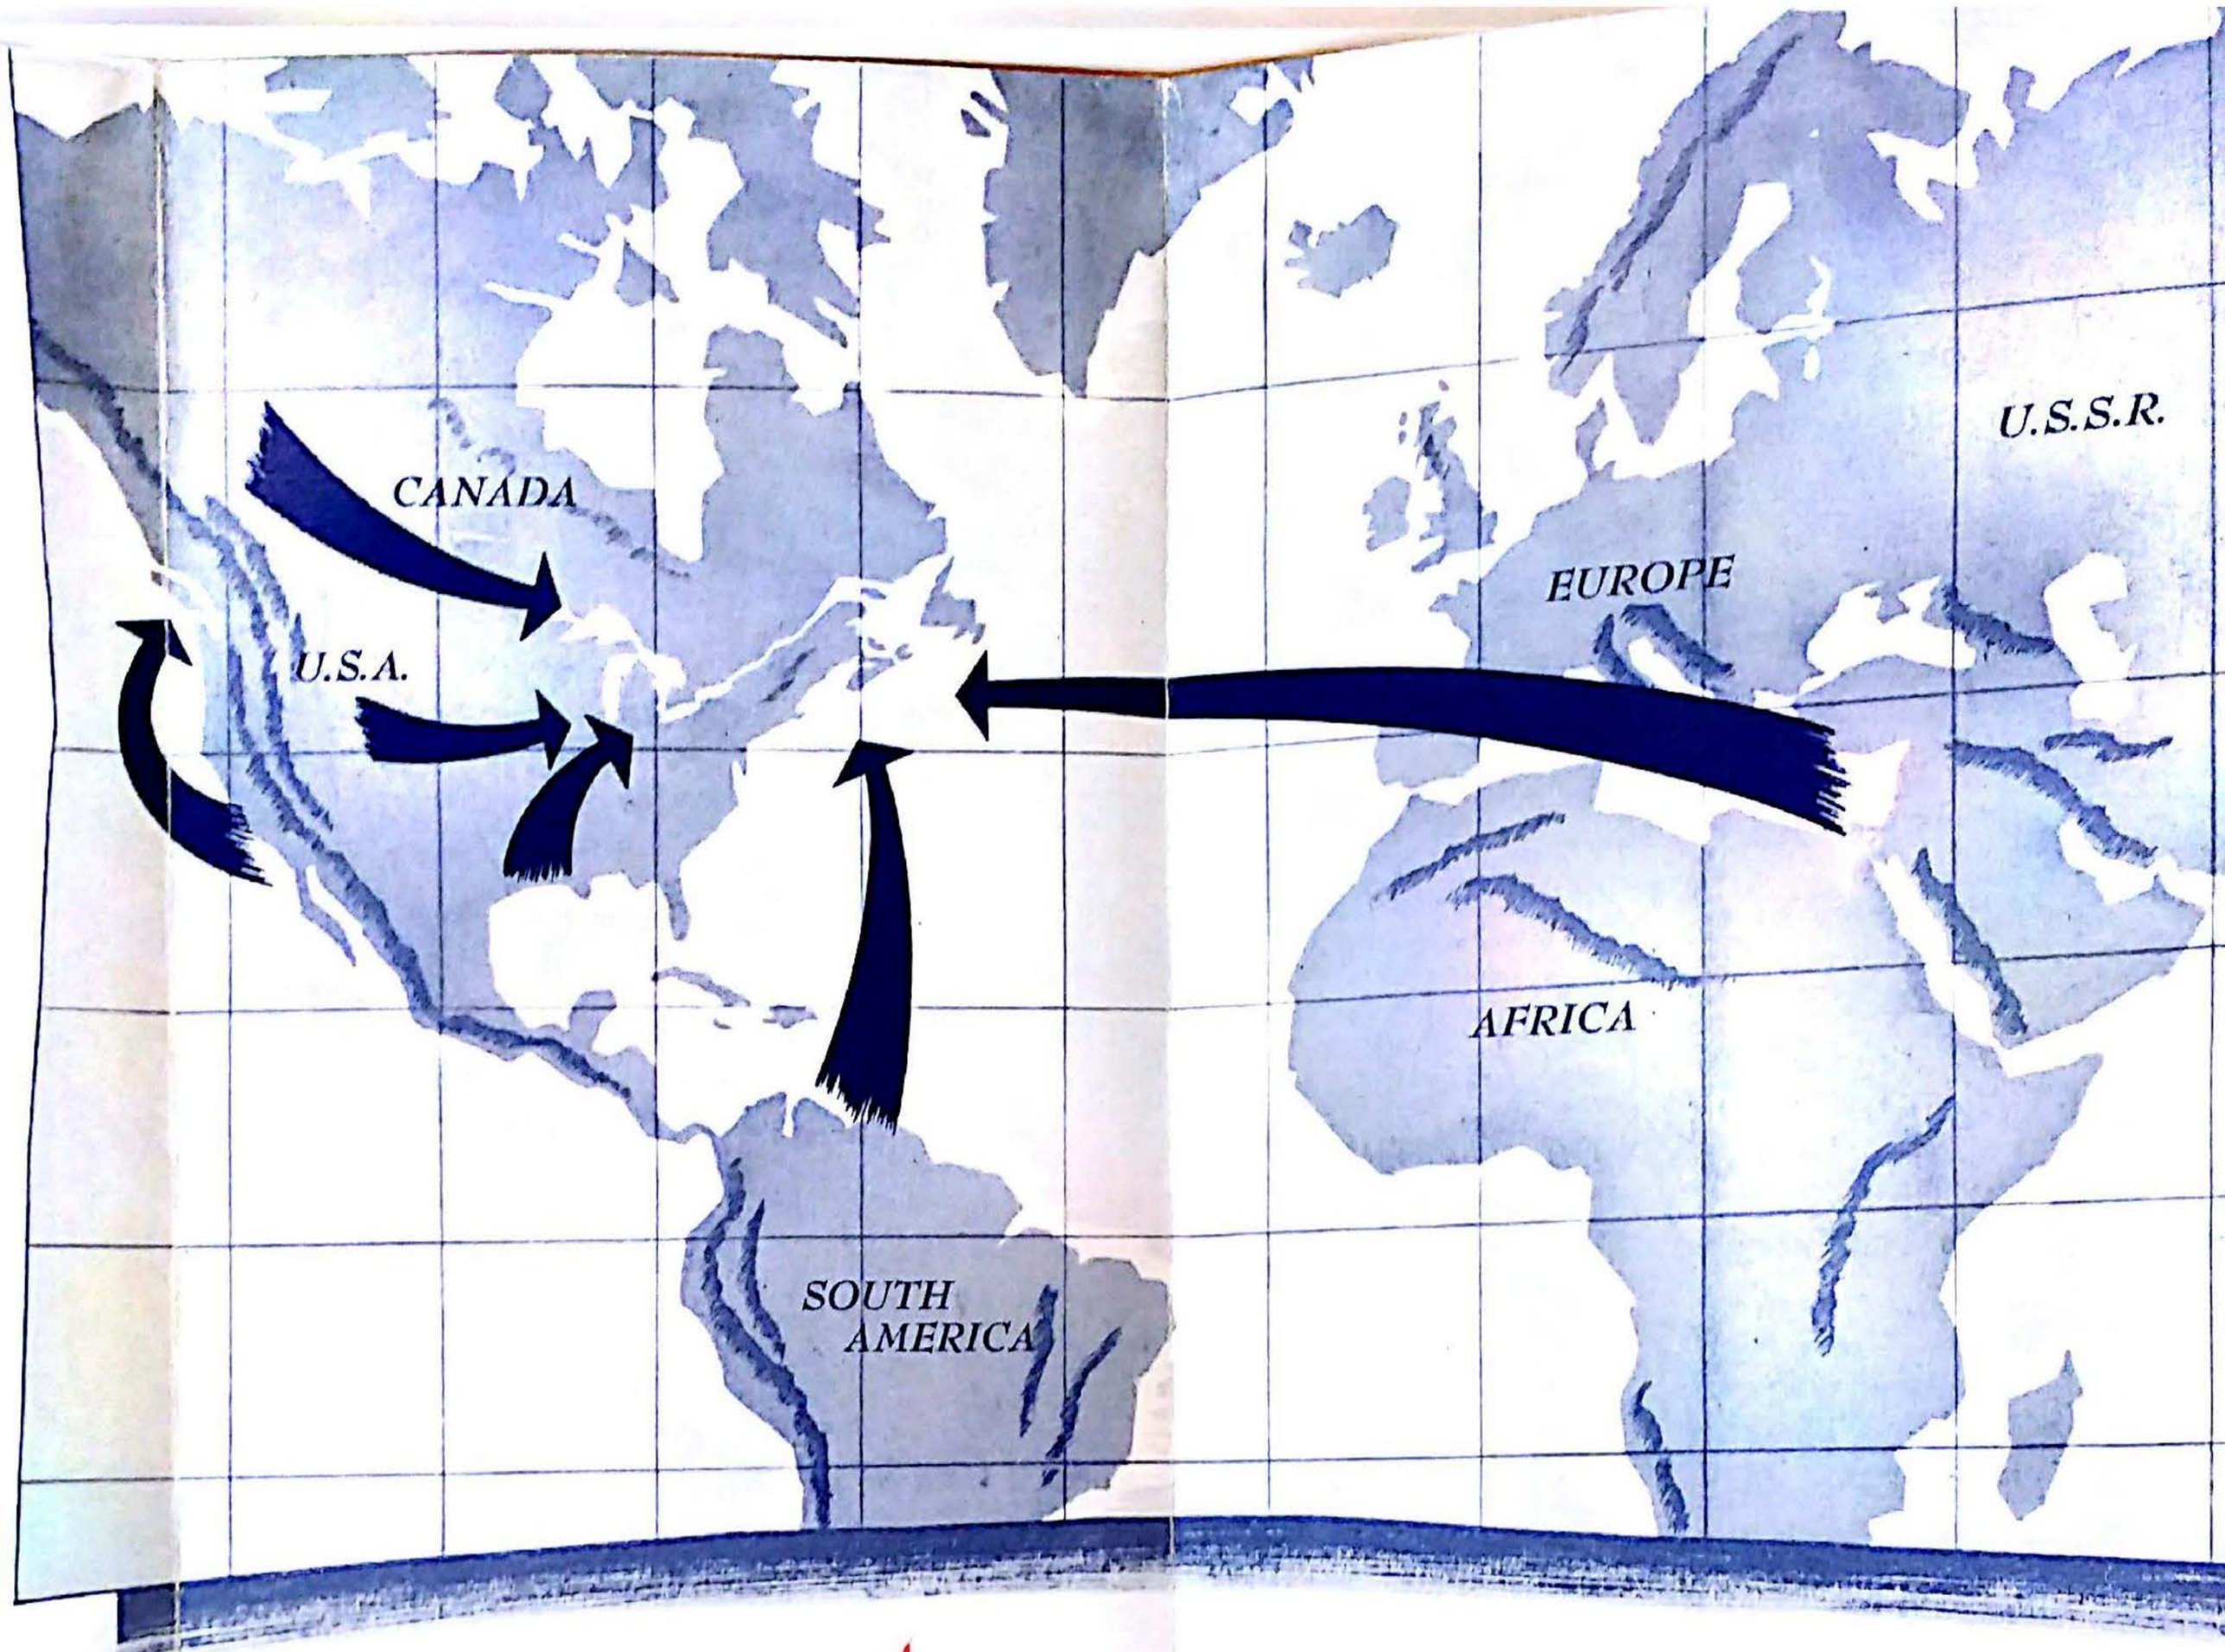

- The "natural" pH (a measure of acidity/alkalinity) of precipitation is in the range of 5.2-5.5 (based upon Antarctic snow.) Precipitation in southeastern Canada tends to be more acidic (lower pH) while that of north and western regions tends to be less acidic (see attached figure.)

- Soils and lakes in the sedimentary (generally southern) portions of the country are partially protected against the effects of acid rain by naturally occuring buffering compounds (e.g. Calcium Carbonate.) This is not true to the same degree of soils and surface waters in the Canadian Shield.

- The acidification of lakes in Ontario and Quebec has made them inhospitable to some game fish and has caused a demand on the part of the environmental groups, the media, and the public for government action against emitters of oxides of nitrogen and sulphur. Concern regarding the potential future effects from oil sands plants emissions is growing in Saskatchewan and N.E. Alberta.

Let Me Tell You About My Travels

Four out of five members of the family that you meet here in Canada come from some other country but I think you'll be most interested in the experiences of the Alberta branch of the clan. A lot of us stay right around home and work in the factories and on the farms out there but a lot more of us are coming east to take on jobs. When we get here we're more than 2,000 miles from home but, believe me, we don't travel by covered wagon these days.

Source: https://www.industrydocuments.ucsf.edu/docs/fsgl0228

Meetings and Attendance

The Company's Governance Policy requires the Board to meet at least six times in a year. The intervening period between two Board meetings was well within the maximum gap of four months prescribed under Clause 49 of the Listing Agreement with Stock Exchanges. The annual calendar of meetings is broadly determined at the beginning of each year.

Board Agenda

Meetings are governed by a structured agenda. The Board members, in consultation with the Chairman, may bring up any matter for the consideration of the Board. All major agenda items are backed by comprehensive background information to enable the Board to take informed decisions. Agenda papers are generally circulated at least seven days prior to the Board meeting.

Information placed before the Board

In addition to matters required to be placed before the Board under the Governance Policy of the Company, the following are also tabled for the Board's periodic review / information / approval:

- Internal Audit findings and External Audit Management Reports (through the Audit Committee).
- Status of safety and legal compliance.
- Risk management processes.
- Succession to senior management (through the Nomination & Compensation Committee).
- Show Cause, demand, prosecution and adjudication notices, if any, from revenue authorities which are considered materially important, including any exposure that exceeds 1% of the Company's net worth, and their outcome.
- Significant court judgement or order passing strictures, if any, on the conduct of the Company or a subsidiary of the Company or any employee, which could negatively impact the Company's image.
- Product liability claims of a substantial nature, if any.
- Default, if any, in payment of dues to any major creditor.
- Write-offs / disposals (fixed assets, inventories, receivables, advances etc.) on a half-yearly basis.
- Half-yearly summary of bank guarantees issued.
- All other matters required to be placed before the Board for its review / information / approval under the statutes, including Clause 49 of the Listing Agreement with Stock Exchanges.

Post-meeting follow-up system

The Governance processes in the Company include an effective post-meeting follow-up, review and reporting process for action taken / pending on decisions of the Board, the Board Committees, the CMC and the Divisional / SBU Management Committees.

Details of Board Meetings during the financial year

During the financial year ended 31st March, 2014, six meetings of the Board were held, as follows:

Sl. No.	Date	Board Strength	No. of Directors present
1	17th May, 2013	18	15
2	25th July, 2013	18	17
3	26th July, 2013	18	17
4	28th August, 2013	15	13
5	25th October, 2013	15	15
6	17th January, 2014	15	14

[Inherent in the concept of trusteeship is the responsibility to ensure equity, namely, that the rights of all shareholders, large or small, are protected.]

taxes, low tourist arrivals into India in the first half coupled with the gestation of new hotel investments, and incubation of new business initiatives.

Quantum improvement in each of your Company's business segments resulted in a robust 12% growth in Gross Turnover to Rs.11,025 crores. Pre-tax profit increased by an impressive 15.5 % to Rs. 2056 crores, while Post-tax profit at Rs. 1371 crores registered a growth of 15.3%. After adjusting for certain once off items, underlying Pre-tax profit for the year registered an even more impressive growth of 19.1% while underlying Post-tax profit grew by a substantial 18.5%. Earnings Per Share for the year stands at Rs. 55.41. Healthy operating results coupled with further efficiency in the management of working capital contributed to an 18% increase in Cash flows from Operations to Rs. 2627 crores.

In order to strike a balance between the need to sustain strategic investments for a secure future and the annual expectation of shareholders for growing income, your Directors are pleased to recommend a dividend of Rs.15.00 per share (previous year Rs. 13.50 per share) for the year ended 31st March, 2003. The cash outflow in this regard will be Rs.418.84 crores (previous year Rs. 334.14 crores) including Dividend Tax of Rs.47.57 crores (previous year Nil). Your Board further recommends a transfer to General Reserve of Rs.1000 crores (previous year Rs.800 crores). Consequently, your Board recommends leaving an unappropriated balance in the Profit and Loss Account of Rs. 343.88 crores (previous year Rs. 325.87 crores).

PROFITS, DIVIDENDS AND RETENTION

(Rs. in crores)

FOREIGN EXCHANGE EARNINGS

The ITC Group's contribution to foreign exchange earnings over the last decade amounted to nearly US$ 2.2 billion, of which over US$1.6 billion was accounted for by agri exports. In this context, it is significant that your Company's earnings from agri exports represent over 2% of the country's export earnings from this sector - a major indicator of your Company's contribution to the rural economy.

During the year under review, your Company, its subsidiaries and the ITC Welcomgroup hotel chain together earned Rs. 1368 crores in foreign exchange representing a growth of over 35%. Direct foreign exchange earned by your Company amounted to Rs. 1294 crores. Your Company's expenditure in foreign currency amounted to Rs.408 crores, comprising purchase of raw materials, spares and other expenses at Rs. 341 crores, and import of capital goods at Rs. 67 crores.

The details of foreign exchange earnings and outgo are provided in Schedule 19 to the Accounts.

WORK AREA: 01 Product Technology

KEY ACTIVITY: 01.04 Chemosensory Research

COORDINATING CENTER: B&W

GROUP COORDINATOR: Hugh Honeycutt

PROJECT NUMBER: 01.04.04 PROJECT LEADER: N. Ayya, R. de Wijk

TITLE: Perception of Menthol and Other Irritants

OBJECTIVE: To characterize and understand the temporal, spatial, and concentration effects of menthols and menthol mixtures in relation to cooling, irritation, and flavor. Such studies may provide insights to optimize presently used formulation for KOOL.

STATUS: B&W has been studying the perception of menthol, cooling, and irritation in cigarettes. Studies have focused on standardizing panel evaluating methods, separating spatial effects on perception and the interaction of menthol with tobacco impact and irritation. Preliminary work also attempted to differentiate the contributions of L- and D- menthol with regard to various flavor and irritation effects.

While these studies have recognized the complexity and importance of menthol in cigarettes, no systematic study has been done to characterize the flavor and irritant aspects of all menthol isomers, differences between synthetic and natural menthol sources and specific components (e.g. menthanone, menthyl acetate) of natural menthol in mediating flavor and irritation. We believe that a systematic characterization would assist in separating the trigeminal contributions from definitive flavor components. In conjunction with these psychophysical characterizations of menthol, we would also begin to study mixtures of menthols to characterize interactions between menthols and other non-menthol components (e.g., nicotine). These studies would provide direction for product development and optimization by identifying specific characteristics/components.
